About IETS TCP

- The IETS TCP (Industrial Energy-Related Technologies and Systems) is a TCP within the IEA Technology Collaboration Programme (https://tcp-guide.iea.org/).

- The IETS Newsletter is compiled and distributed twice a year, typically in July and January.
- The Task Status reports will be prepared twice a year and presented at the ExCo meetings.
- Before April 1 every year, the TM must prepare a contribution to the IETS Annual Report.
- The Final report shall consist of three main parts:
  - Executive Summary
  - Synthesis of all PO work, findings from workshops, and general conclusions.
  - Compilation of all PO contributions

Typically, the Final report must be submitted to the reviewers through the IETS Secretariat one month before an ExCo meeting

About IETS TCP

- Structure of Semi-Annual status report.

1. Task structure – current term

2. Confirmed participants

3. [Other basic information at POs and TM discretion]

4. Achievements – results

5. Dissemination

6. Collaboration

- Structure of the Final report (...)

- Structure of Annual report.

1. Background
Short description of the context of the Task, why the area is of importance and what the goals of the Task are.

2. Description
• Scope
• Subtasks
• Main deliverables
• Duration

3. Activities during [valid year]
• Activities**,** meetings and workshops: Submit short descriptions of events, including e.g. main conclusions, participants, etc.
• Reports (and their availability)

4. Planned work for [the coming year]
• Work planned
• Further work needed
• Meetings

Subtask 1 of Task XXIV

1st of November, 2024 - 1st November, 2027

Enabling a shared database of ex-ante models of industrial processes, decarbonization technologies and energy systems featuring sustainability metrics

1. Develop specifications and procedures for generating, validating, and sharing process and energy integration models.

2. Share flexible ex-ante (blueprint) models of key industrial sectors.

3. Share energy technology models to promote renewable energy use in industry.

4. Share energy systems models, including distribution networks and seasonal demand data.

5. Compare and document process integration methods used by the participants for assessing the decarbonization pathways in industry.

6. Compare heat and mass integration results to outline roadmaps of industrial decarbonization and symbiosis.

7. Share findings and experiences through workshops, scientific events, and educational programs.

Subtask 1 of Task XXIV

Deliverables:

1. Ontologies and procedures for sharing the ex-ante models developed by the Subtask participants based on previous and ongoing research projects.

2. Reporting and documentation tool based on Markdown language that features referencing and visualization functionalities, and that can be readily deployed in a web-based format or shared as portable document formats.

3. Repository with an open-source database of documented ex-ante models, as well as comparison of experiences with in-house process integration methods used in the previous and ongoing projects of the participants.

4. Collaborative report defining the role of process integration in the industry decarbonization based on shared results of existing and ongoing case studies.

5. Findings about opportunities and the challenges for housing and maintaining an open-source database of shared models, including issues of confidentiality and intellectual property.

6. Identification of advantages and challenges of the computational frameworks already used by the participants in terms of maintainability, distribution and scalability.

7. Dissemination of results in TCP reports, EFCE and ECOS conferences and other events. Knowledge transfer in Continuing Education Programs.

Becoming Participants

- A participant in a Task, called Participating Organization (PO, i.e. a company, institute, university or other organization), is the contracting party for a country or a sponsor (CP, one per country). The Task Managers (TM) coordinate the activities of the Task (EPFL)

- Tasks are task-shared in which costs are borne individually by each PO in a Task. Tasks have one or more Subtasks. Any interests from a PO to take a role as Activity Leader shall be approved within each Subtask.

- Procedure: Task manager sends confirmed POs to IETS secretariat. Secretariat send the list to CPs; CPs send email to TMs and Secretariat guaranteeing POs fulfillment of obligations.

- The POs are responsible for informing their ExCo delegate (CP), since the CP will ultimately be responsible for the commitments of POs.

- If additional organizations want to join the Task, the Task Manager and existing POs agree on new joining organizations

- If the PO belongs to an IETS country, there is no IETS fee to participate in a Task.

Responsabilities

Description of the obligations for participant organizations (POs):

- POs have to agree to fulfill commitments in terms of both time and the production of Task products. About 13 person-weeks/year; understanding that this working time can be shared with their own national research projects.

- Participants must have the funds and the time to attend working meetings of the operating period (1 online kick-off + 3 in-person i.e., 1 per year). POs shall participate in the number of meetings stipulated in the legal text, including travel costs.

- POs must actively contribute to building a shared database of models and methods through networking and collaborative discussions. Specific bilateral discussions can be also scheduled.

- POs must individually contribute and review the technical reporting of the Task. TMs, Sub-TMs and POs together shall deliver a final report.

- POs share to TMs and the Secretariat any presentations at conferences seminars and workshops for posting at the websites, as well as open reports, summaries, proceedings, etc.

POs' projects

IETS tasks involve reporting of the results in research projects, normally the POs national project(s).

- Each PO shall contribute with experiences and results (as available) from one or more project(s).
- The project(s) should preferably be recently finished or ongoing and already funded (to avoid long lead times, waiting for national approval of funding and project results).
- The required minimum project dedication corresponds to 13 person-weeks/year.
- No auditing or reporting of person weeks used is done.

Other legal considerations:

- IETS reports are made publicly available on iea-industry.org

  → It is not considered plagiarism or self-plagiarism to publish the same material in reports and scientific journal articles **(IETS reports are grey literature** → "that which is produced on all levels of government, academics, business and industry in print and electronic formats, but which is not controlled by commercial publishers"**)**

  → IETS reports may include any material from open access works in scientific literature.

  → IETS reports may include (parts of) subscription-based works from scientific literature.

- All main results from the Subtask, including outcomes from workshops shall become open access, as long as it does not affect Non-Disclosure Agreements between collaborators and their industrial partners.

- POs may decide if a small part of a report or a shared model is deemed confidential.

Template:

The Task Manager herewith notifies the IETS Secretariat that the below-mentioned Participating Organisations (POs) participate in the following Tasks and Subtasks and will fulfil the obligations stated in the Task/Subtask proposal.

The IETS Secretariat will seek approval from the responsible Contracting Party (CP).

The Participating Organisations are accepted unless the Task Manager receives a rejection from the IETS Secretariat or the responsible Contracting Party.

Participation of groups in [Country]

Date of notification	YYYY-MM-DD
First notification for Task/subtask or update?	☐ First notification ☐ Update
IETS Task number:	NN
Subtasks number(s):	*If applicable*
Responsible Contracting Party (i.e., member country or sponsor):	CP/Sponsor
Task Manager:	NN
Confirmed Participating Organizations:	**Lead contact:**
